TRADAFY – FREEMIUM TO PAID CONVERSION MODEL
Developer Specification Document

1. Objective

This document defines the Freemium-to-Paid conversion model for Buyer and Supplier users within the Tradafy platform. The goal is to allow new users to experience full platform value through a controlled initial access, followed by progressive limitations that drive conversion to Business or Premium plans.

2. Core Principle

Users must experience real deal execution value before being asked to pay. Access is initially open, then progressively limited based on usage (deal count and feature access).

3. User Types Covered

- Buyers
- Suppliers

4. Phased Access Model

4.1 Phase 1 – Full Experience (Controlled)

Applies to: New users upon account creation

Objective: Allow users to experience the full platform during their first deal.

Access granted:

- Full deal workspace access
- Chat between buyer and supplier
- Deal timeline (milestones)
- Document upload and management
- Shipping bid interaction (view and receive bids)

Limitation:

- Maximum 1 fully unlocked deal

4.2 Phase 2 – Soft Limitation

Trigger: Completion or creation of the first deal

Objective: Introduce friction while still allowing limited usage

Access:

- Maximum of 3 total deals
- Reduced visibility within the platform

- Limited access to advanced workspace features

User messaging:

- “Upgrade to continue managing deals efficiently.”

4.3 Phase 3 – Hard Lock (Conversion Trigger)

Trigger: Attempt to create or manage additional deals beyond limits OR use of restricted features

Objective: Force upgrade decision at critical moment

Restricted features:

- Chat between parties
- Deal timeline
- Document upload and management
- Shipping integration

Blocking message:

- “To continue and secure your deal, upgrade your plan.”

5. Feature Locking Strategy

The following features must be gated as primary conversion drivers:

Feature	Free Access (Phase 1)	Soft Limit (Phase 2)	Locked (Phase 3)
Deal Workspace	Full (1 deal)	Limited (max 3 deals)	Restricted
Chat	Enabled	Limited	Locked
Deal Timeline	Enabled	Limited	Locked
Document Management	Enabled	Limited	Locked
Shipping Bids	Enabled	Limited	Locked

6. Upgrade Trigger Points

Upgrade prompts must be displayed at key interaction moments:

1. When user tries to open chat after soft limitation
2. When user attempts to upload documents
3. When user tries to progress deal milestones
4. When user attempts to access shipping bids beyond limit
5. When user tries to create a 4th deal

7. UX Copy Guidelines

Do not use technical or negative wording such as 'Feature Locked'. Use conversion-driven messaging instead:

- “To continue and secure your deal, upgrade your plan.”
- “Unlock full deal execution to proceed.”
- “Complete your deal without interruption.”

8. Subscription Plans (Overview)

Plan	Purpose	Key Access
Free	Trial and onboarding	1 full deal, then limited
Business	Operational usage	Full workspace, unlimited deals
Premium	Advanced execution	Priority visibility, legal support, enhanced features

9. Additional Paid Services (Not Included in Plans)

Service	Price
Legal Review (Full)	EUR 250
Legal Support (Lawyer)	Custom
Credibility Report	EUR 250
Business Expansion Support	Custom
Private Labeling	Custom
Offline Verification (Tradafy Trust Label)	EUR 1,000 (Exclusive)

10. Shipping Agent Model (Separate System)

Shipping Agents operate under a separate access and pricing structure and are not included in the Buyer/Supplier plans.

10.1 Access Model

- Access to active shipping requests
- Ability to submit bids on deals
- Visibility on routes, volumes and deal details
- Communication with deal owners upon selection

10.2 Pricing Model

- Early Access: Free (conditional on activity)
- Introductory Phase: EUR 49/month
- Standard Phase: EUR 149/month

- Commission: 1% per shipment

10.3 Control Mechanisms

- Winning bid requires confirmation within defined timeframe
- Failure to confirm may result in penalties or reduced ranking
- Optional wallet/deposit system for quality control
- Agent ranking based on reliability and performance

11. Final Notes

This model must be implemented with a focus on user experience and conversion. The objective is not to restrict users arbitrarily, but to guide them toward upgrading at the moment they perceive real deal value and risk of interruption.
